MILESTONE 2

GLOBAL ECONOMIC AND DEMOGRAPHIC TRENDS ANALYSIS

BUSINESS REQUIREMENT DOCUMENT (BRD)

ANUSHIYA S
DADS ONLNE
MARCH 25

PROJECT OVERVIEW

This dataset contains key statistics for countries around the world—like population, GDP per capita, literacy rate, birth/death rates, and economic sectors.

- It helps us compare development levels,
- spot growth opportunities
- predict future trends.

GROSS DOMESTIC PRODUCT

- GDP per capita is the economic output of a nation per person.
- Measures the prosperity of a nation.
- Per capita income is the amount of money earned per person.
- Determines the standard of living and quality of life of a population.

OUR DATASET OVERVIEW

226
ROWS

20
COLUMNS

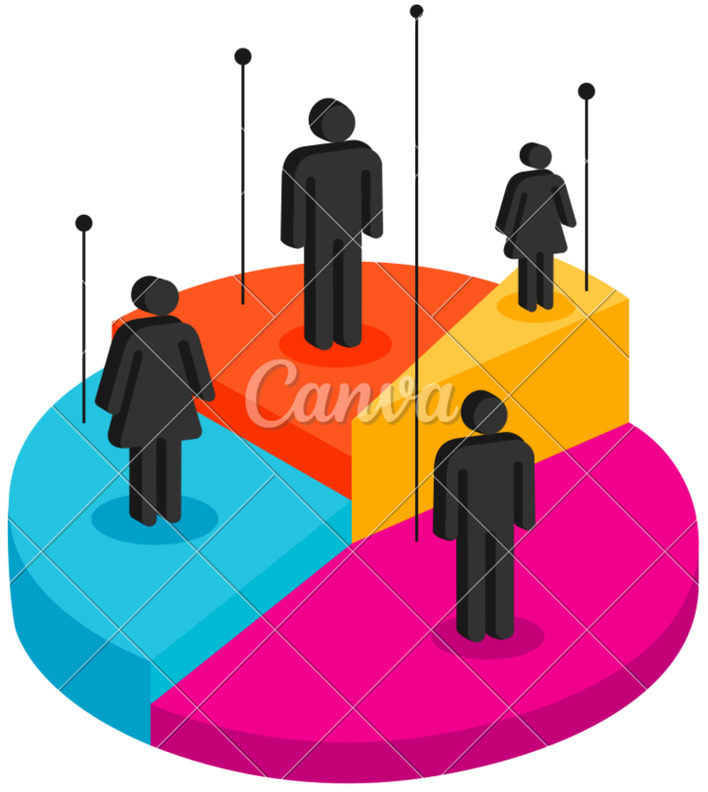
- COUNTRY,
- COUNTRY CODE,
- REGION,
- POPULATION,
- AREA (SQ. MI.),
- POPULATION,
- DENSITY (PER SQ, MI,),
- COASTLINE (COAST/AREA RATIO),
- NET MIGRATION,
- INFANT MORTALITY (PER 1000 BIRTHS),
- GDP ($ PER CAPITA),
- LITERACY (%),
- PHONES (PER 1000),
- ARABLE (%),
- OTHER (%), CLIMATE,
- BIRTHRATE,
- DEATHRATE,
- AGRICULTURE,
- INDUSTRY,
- SERVICE.

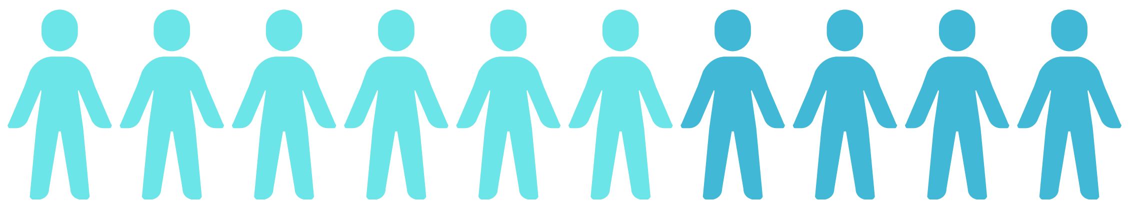
PROJECT PREPARATION

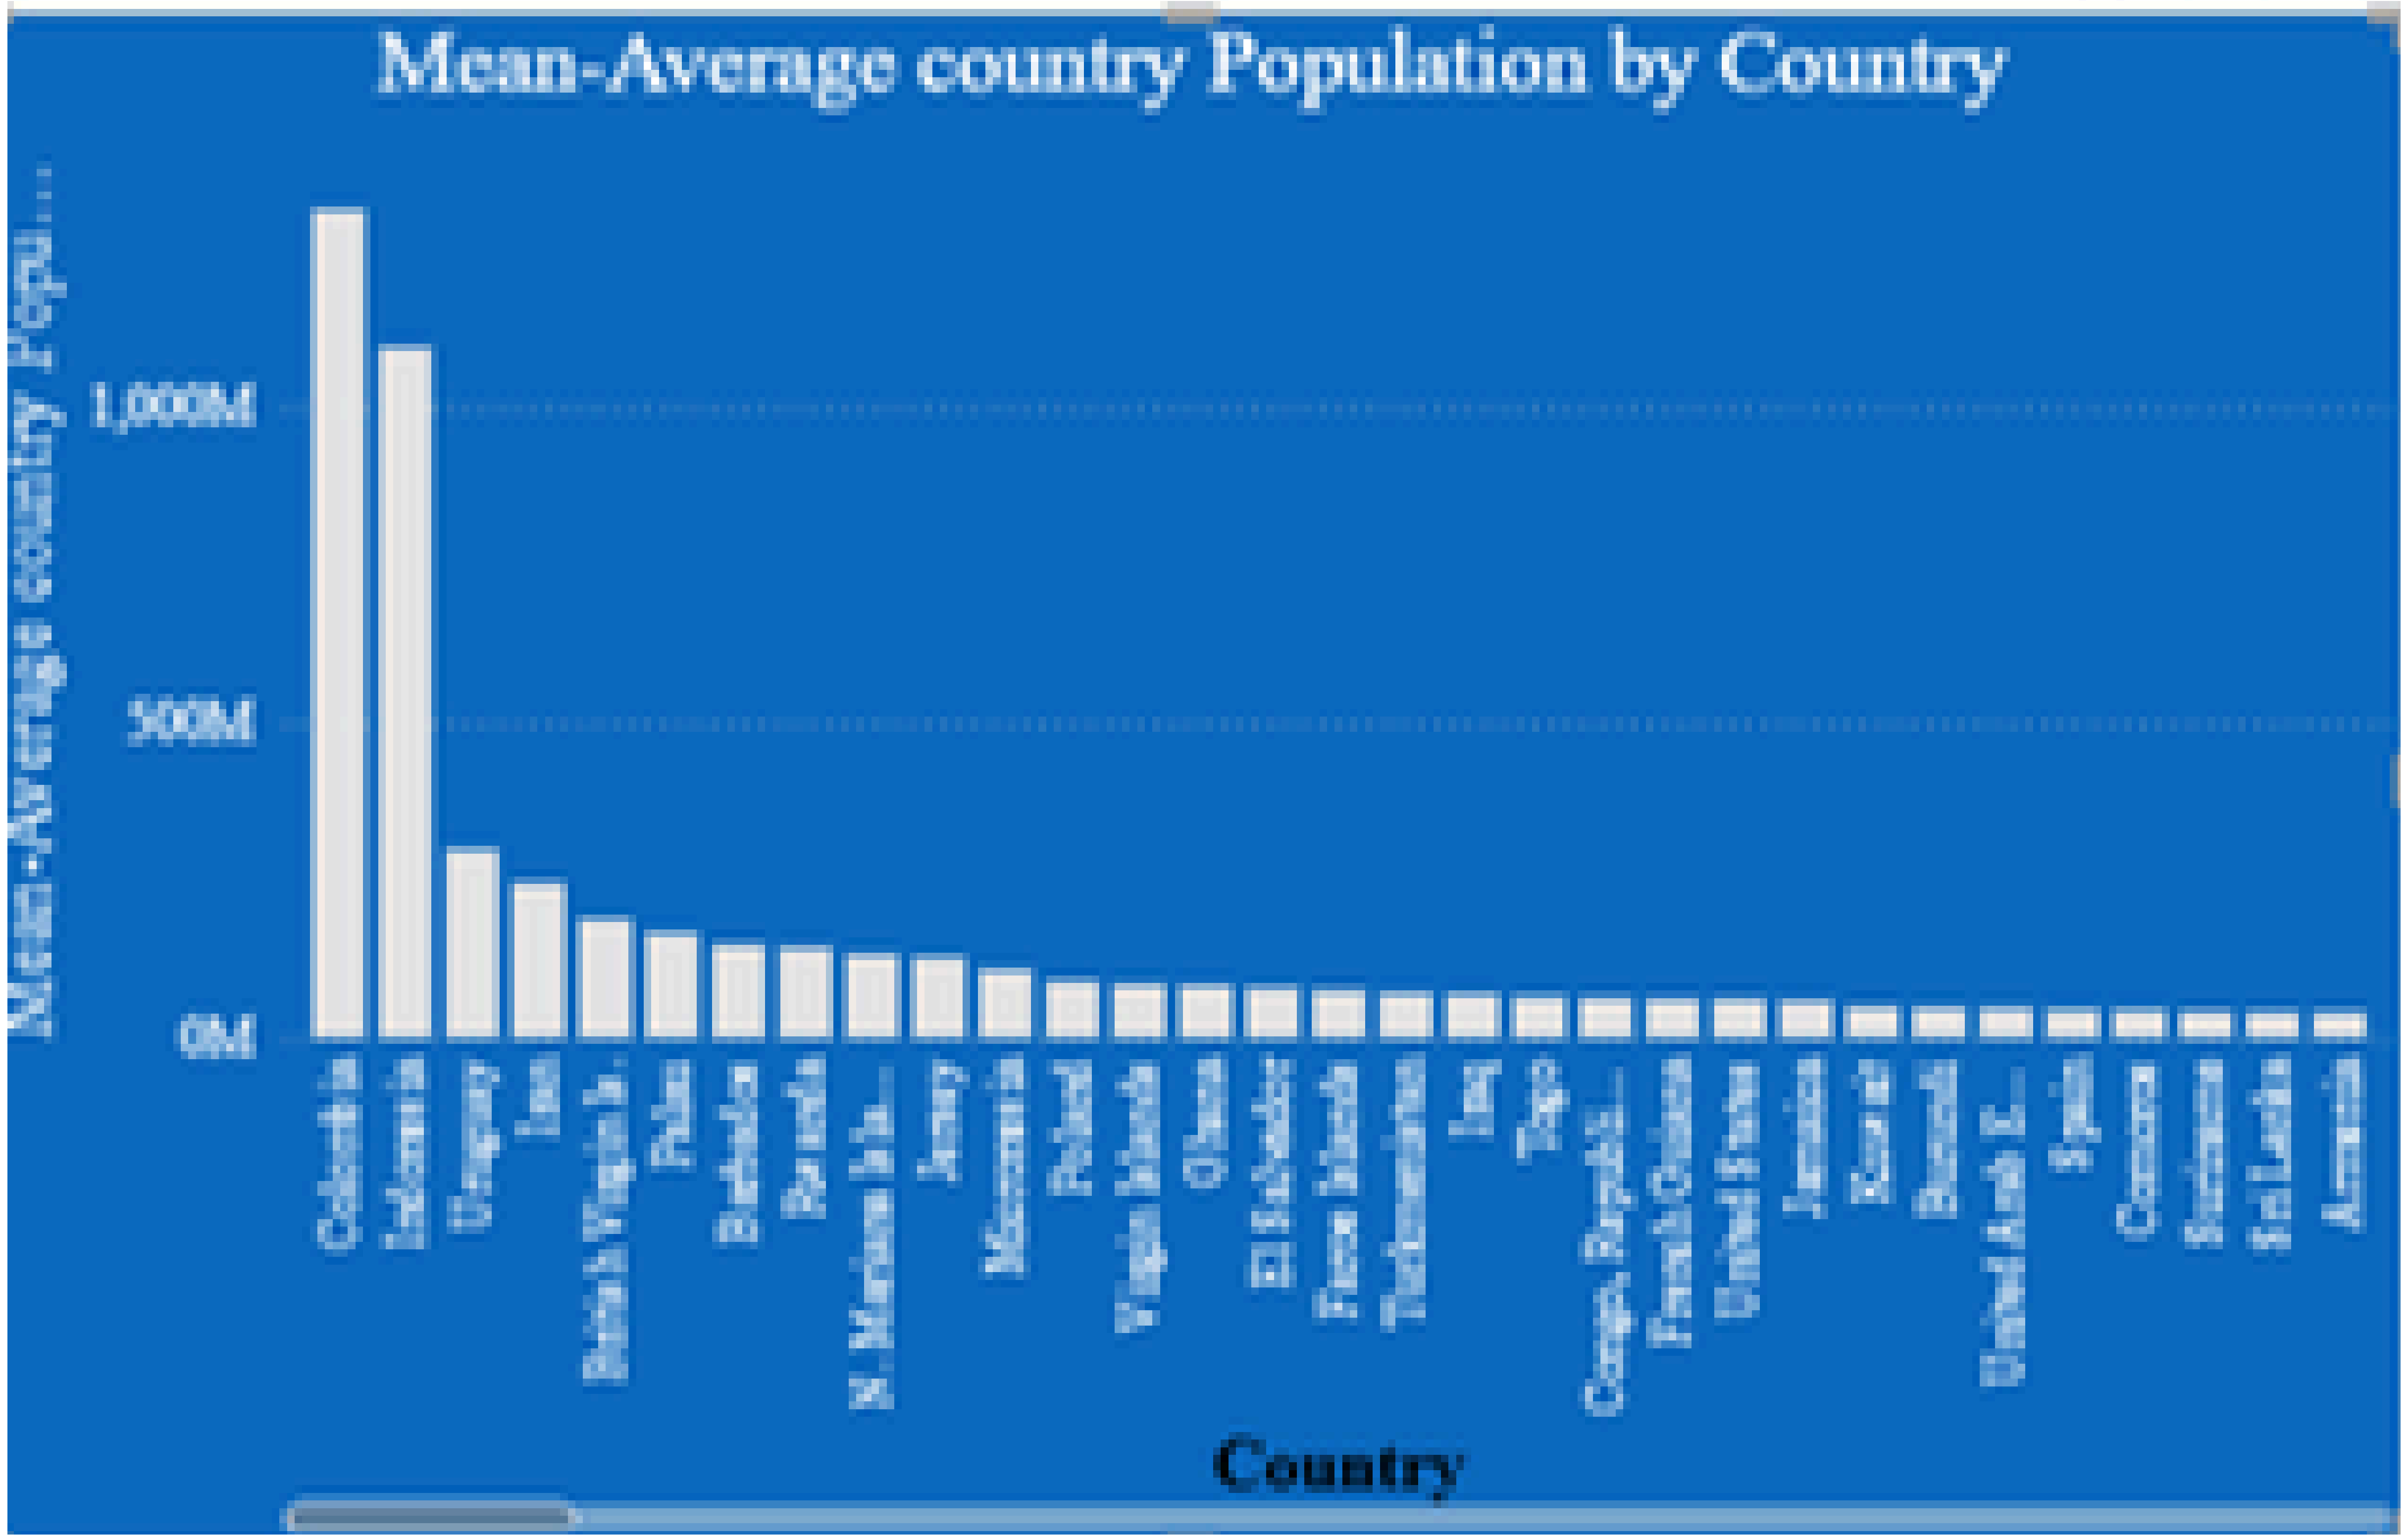
- We have given 4 Excel worksheet containing data of Global Economic Trends
- Converted all the Excel worksheet into CSV file and imported into PowerBi and Transformed the data, cleaned using the Power query Editor.
- Merged and related the tables based on common fields (such as Country Name and Country Code).
- Loaded all the cleaned Dataset to PowerBi
- Connect the CountriesWorld dataset from SQL and the remaining datasets from Excel to perform data analysis
- Perform basic descriptive statistical analysis on the data to gain an understanding key measures like Mean, Median, Standard deviation, correlations
- Performed some of the DAX Functions like, average, count, filter
- DATA Visualization using PowerBi

Your paragraph text

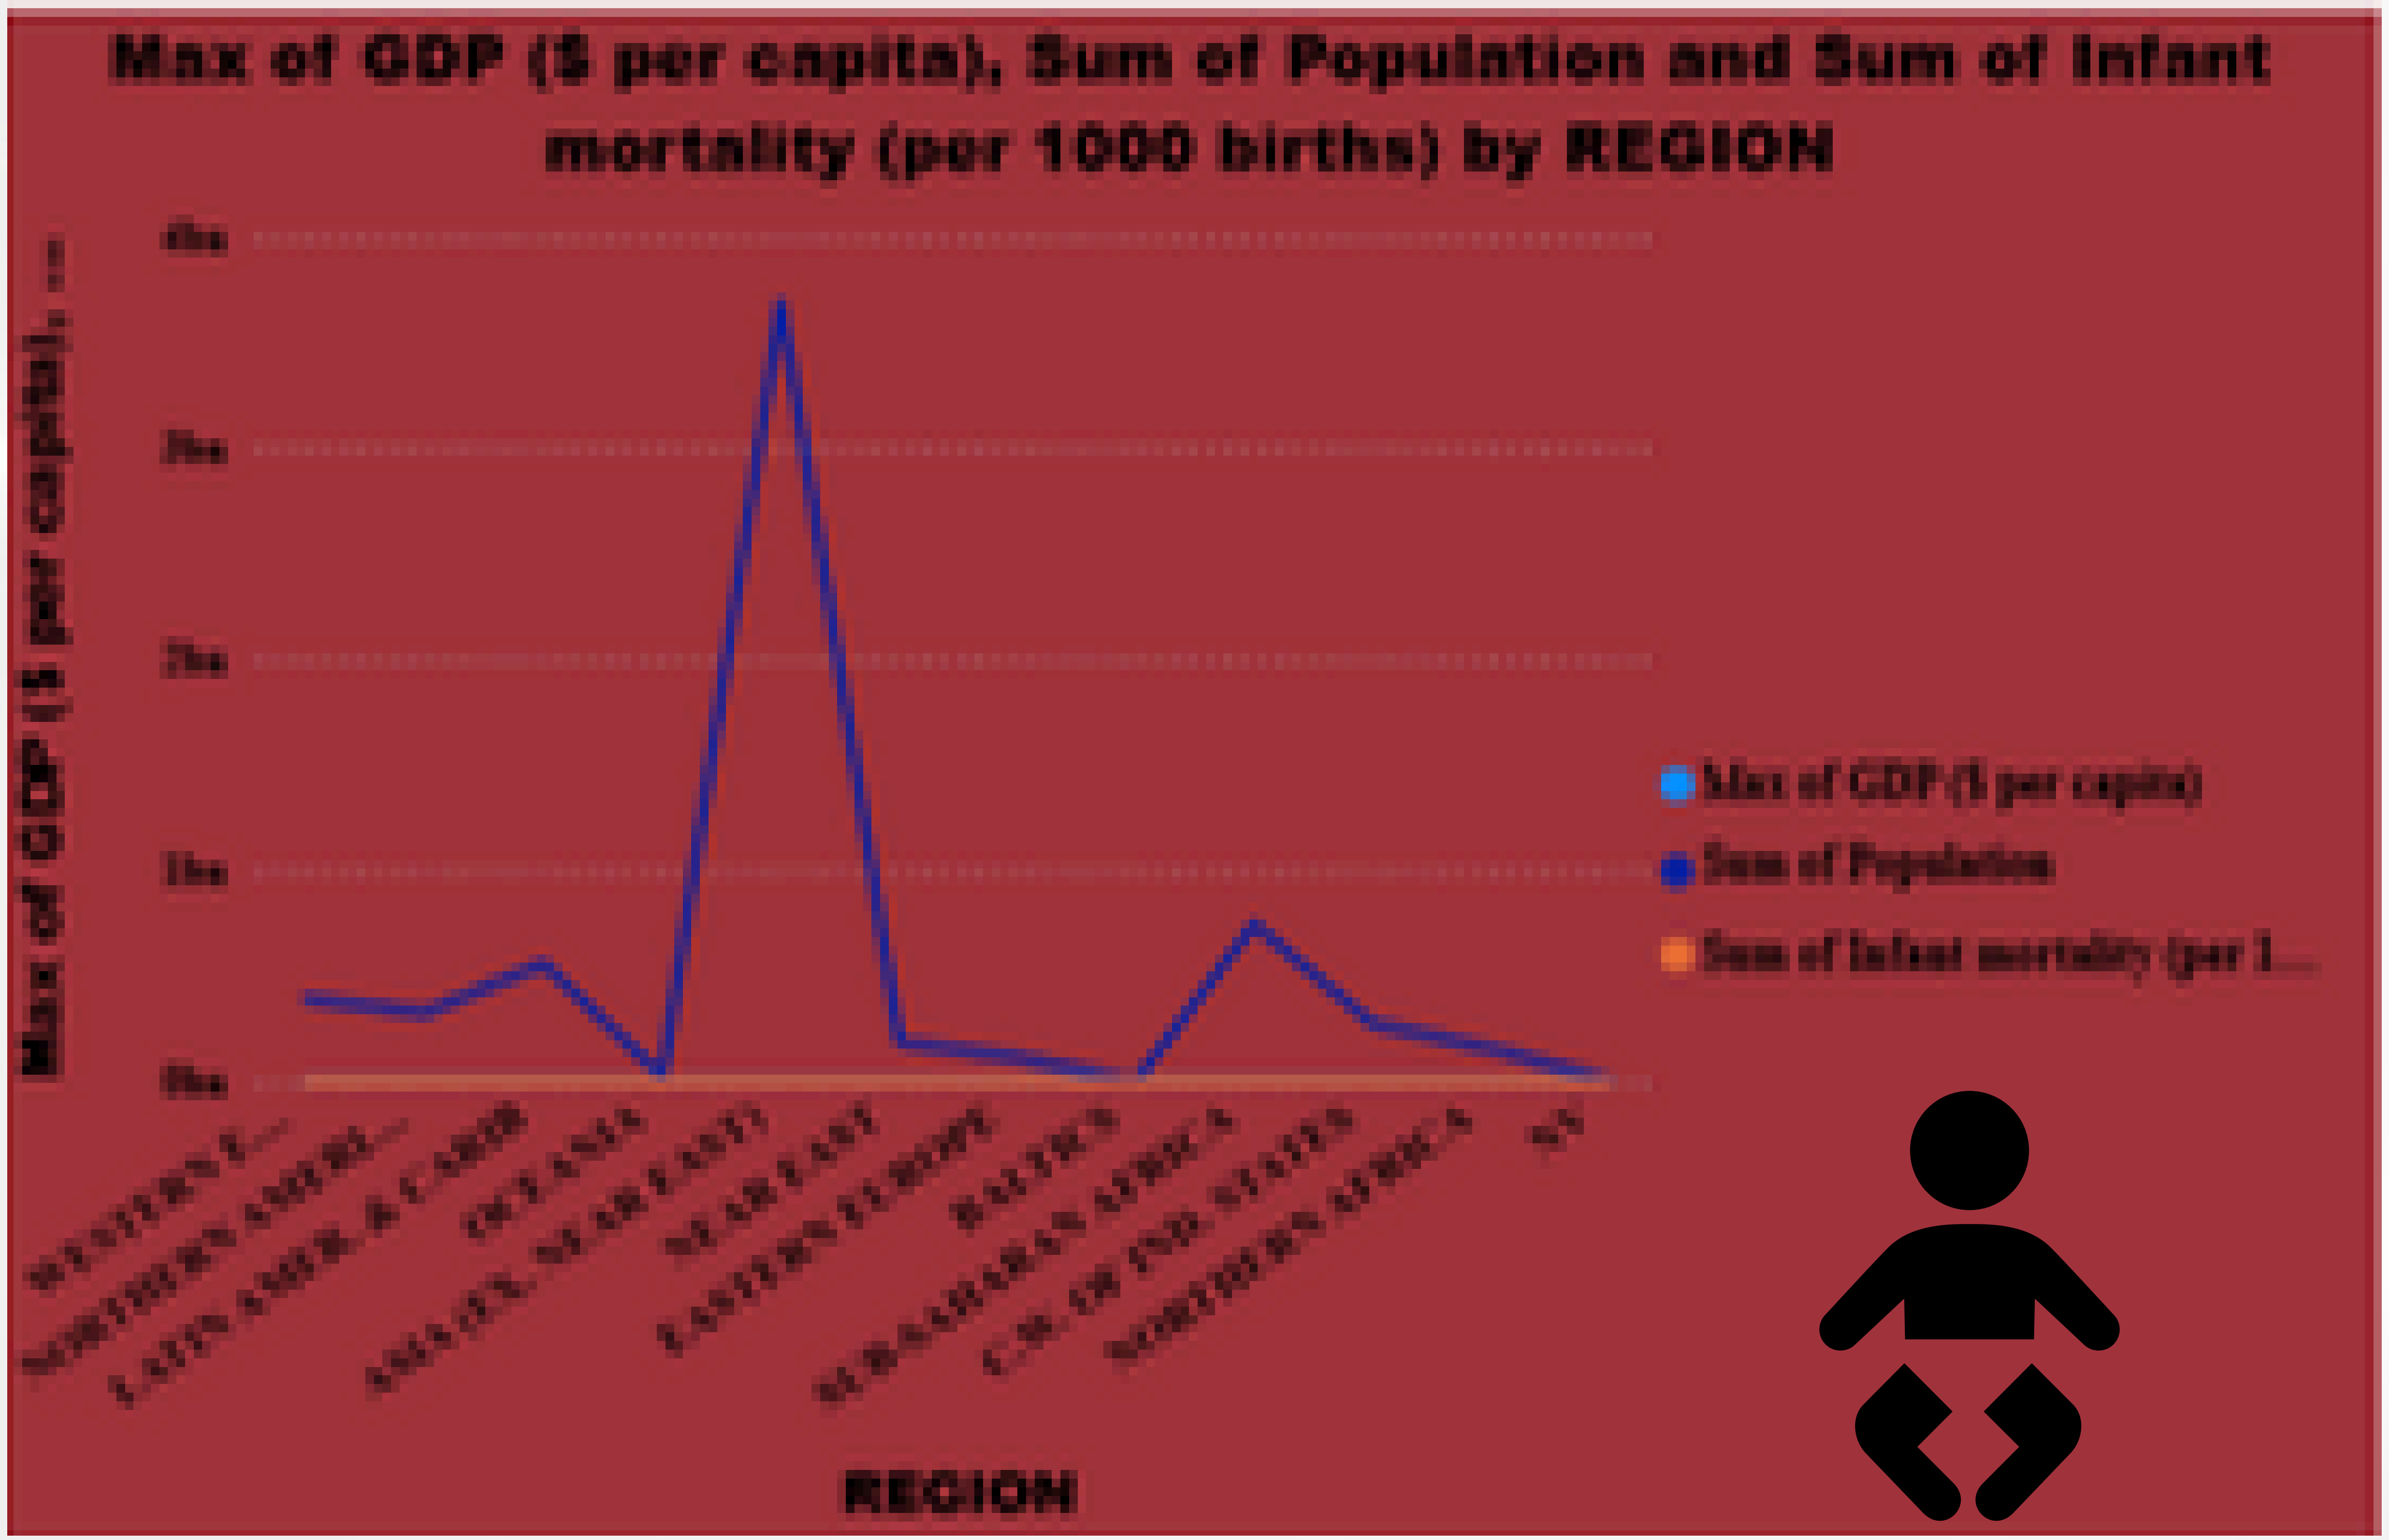
AVERAGE POPULATION OF COUNTRIES







INFANT MORTALITY RATES ACROSS REGIONS



POWERBI DASHBOARD

STORY NARRATION

1

🌍 A Snapshot of Our World

This dataset is like a photograph of countries around the globe — showing how they differ in economy, health, and population.

💰 Wealth

Some countries are extremely rich, with very high GDP per person, while others struggle with very low income levels. The gap is huge.

2

🍼 Health

Infant mortality tells another part of the story. In richer countries, fewer babies die in their first year, while poorer nations often face higher rates — but there are some surprising exceptions.

👥 Population

Billions of people live in a few very large countries, while others are tiny with only thousands of people. Population density varies wildly.

3

📖 The Big Picture

When you put it all together, you see that wealth, health, and geography are linked — but not in the same way for every country. The dataset helps us understand these differences.

1095351995

MY OBSERVATION

Max GDP per capita	Macau – 55,100.
Min GDP per capita	African nations under 600.
Top population	Colombia-1313973713, Indonesia-1095351995
High birthrate	African nations (>35 per 1,000).
High deathrate	Eastern Europe & some African countries.

CONCLUSION

- **The cleaned dataset gives a clear view of ~226 countries with accurate values.**
- **Macau has the highest GDP per capita, while some African nations have the lowest.**
- **China and India lead in population, and economic structures vary from service-led in developed countries to agriculture-heavy in developing ones.**
- **Birth and death rates show aging populations in rich nations and high growth in parts of Africa.**
